The Data Analyst's Toolbox

Data Science Process
- Getting and Cleaning Data
- Exploratory Data Analysis
- Statistical Inference
- Classification Models

Programming Skills

Python
- Pandas
- NumPy
- Matplotlib, Seaborn
- SciKit-Learn

This is to certify that

Rodrigo Guerrero Zerbini

has successfully completed the online bootcamp:

Introduction to Data Analytics

A 120-hours project-based course offered by Ubiqum Code Academy where successful participants learn how to use data mining and machine learning techniques with Python.

The students applied foundational data science skills to investigate patterns in sales data and provide insights into customer buying trends and preferences. The conclusions drawn from these patterns help to understand the relationship between customer demographics and purchasing behavior.
